Northern Marianas College
CURRICULUM ACTION REQUEST

Course: BI103 Marine Biology

Effective Semester / Session: Fall 2022

Type of Action:

- New
- X Modification
- _ Move to Inactive (Stop Out)
- _ Cancellation

Course Alpha and Number: BI103

Course Title: Marine Biology

Reason for initiating, revising, or canceling:
This course has been modified for periodic updates: addition to Purpose and Catalog Course Description; alteration to Course Outline, Method of Evaluation, Instructional Goals, Student Learning Outcomes, Assessment Measures, and textbook.

Course: BI103 Marine Biology

1. Department
   Sciences, Mathematics, Health & Athletics

2. Purpose
   This course provides an intensive overview of biological and ecological concepts. During this course, students will explore the biological and physical principles affecting human/environment interactions in the marine ecosystem. This course will also show cell structure and chemistry; growth, reproduction, genetics, evolution, and anatomy/physiology of a variety of marine organisms including micro-invertebrates and vertebrates. This course will provide the knowledge of our marine species and their importance to society. Lastly, this course will provide a platform to promote water competency in terms of safety and proper interactions with the marine ecosystem.

3. Description

   A. Required/Recommended Textbook(s) and Related Materials
      Required:

      Recommended: None

   B. Contact Hours
      1. Lecture: 3 per week / 45 per semester
      2. Lab: 3 per week / 45 per semester
      3. Other: None

   C. Credits
      1. Number: 5
      2. Type: Regular Degree Credits

   D. Catalogue Course Description
      This course focuses on marine organisms, the sea as a habitat, and relationships between organisms and the physical/chemical properties of their environments, their adaptations to those environments, and human relationships with the marine ecosystem. Students will study marine organisms, elements of biological, chemical, and physical oceanography, field sampling methods with associated statistics and laboratory techniques. Adaptations to diverse marine environments and marine microbiology will also be emphasized. The class will study physical features of marine waters, nutrients, biological productivity, and regional topics in marine science. Specific biological concepts covered include: cell structure and chemistry growth, reproduction, genetics, evolution, and anatomy/physiology of a variety of marine organisms including micro-invertebrates and vertebrates. In
Course: BI103 Marine Biology

Addition to biological concepts, emphasis will be placed on basic water competency skills and best practices while interacting with the marine environment. Prerequisite: None. English Placement Level: EN101, Math Placement Level: MA091 or consent of instructor. (Offered Fall and Spring).

E. Degree or Certificate Requirements Met by Course
This course fulfills the requirements for the A.S. degree in Natural Resource Management. This course also serves as an elective science requirement for other program majors.

F. Course Activities and Design
Activities include: problem based learning case study (Micronesian Challenge), seminars, cooperative learning activities, homework assignments (readings and project), laboratory and field investigations, tests and quizzes, field trips, service learning project, online assignments, activities, and research projects.

4. Course Prerequisite(s); Concurrent Course Enrollment
Prerequisites: EN095 & MA089
Concurrent Course Enrollment: None

Required English/Mathematics Proficiency Level(s)
English Placement Level: EN101
Mathematics Placement Level: MA091

5. Estimated Cost of Course; Instructional Resources Needed
Cost to the Student: E.g. "Tuition for a 5-credit hour course, cost of the textbook, materials, and lab fees.

Cost to the College: Instructor's salary

Instructional resources needed for this course include: classroom and laboratory equipped space; whiteboard and whiteboard markers; audio-visual programs/software; multimedia projectors; various laboratory materials, chemicals, and equipment.

6. Method of Evaluation
Students' learning will be assessed on: the basis of class attendance and participation, homework completion, in-class and online quizzes, midterm and final exams, and presentations. For laboratory activities, students will be evaluated on: the basis of attendance, laboratory exercise completion and laboratory pre-and post-reports. NMC's grading and attendance policies will be followed.
7. Course Outline
This is a topical outline and does not necessarily indicate the sequence in which the material will be presented.

1.0 Applying Scientific Principles to Class Assignment and Research Topics
   1.1 The role of science in everyday life
   1.2 Use of basic measurement tools
   1.3 Making observations
   1.4 Analyzing patterns of data to solve a problem
   1.5 Evaluating scientific experiments
   1.6 Identifying constants and variables
   1.7 Drawing conclusions using data
   1.8 Recognizing logical hypothesis
   1.9 Research validity

2.0 Describing and Identifying Specific Ecological Principles
   2.1 Associations between symbolic organisms
   2.2 Abiotic factors chemical and physical properties
   2.3 Organism interaction
   2.4 Trophic dynamics
   2.5 Community structure
   2.6 Habitats

3.0 Explaining Fundamental Theories of Sea Floor Spreading
   3.1 Plate tectonics
   3.2 Continental drift
   3.3 Plate boundaries and land forms

4.0 Identifying Marine Organisms Using Basic Taxonomic Principles
   4.1 Taxonomic relationships and classification
   4.2 Life histories (evolution)
   4.3 Anatomy and physiology
   4.4 Adaptation

5.0 Analyzing the Interactions of Humans and the Marine Environment
   5.1 Cultural connections
   5.2 Marine resources
   5.3 Pollution
   5.4 Modified habitats
   5.5 Economic connections
   5.6 Mitigating actions and best practices for marine ecosystem interactions
8. Instructional Goals
The course will introduce students to:

1.0 The scope of the field of marine biology, both scientifically and within the context of society in general;

2.0 The major groups of organisms that inhabit the marine environment including: taxonomic relationships, life histories, and adaptations to specific kinds of habitats;

3.0 Ecological relationships in a variety of marine systems; and

4.0 The effects associated with pollution, habitat modification, and exploitation of resources in marine environments.
9. **Student Learning Outcomes**
   Upon successful completion of this course, students will be able to:

   1.0 Identify marine organisms using basic taxonomic principles;

   2.0 Describe and identify ecological principles observed in marine environments;

   3.0 Explain fundamental theories of sea floor spreading;

   4.0 The effects associated with pollution, habitat modification, and exploitation of resources in marine environments.

10. **Assessment Measures of Student Learning Outcomes**
    Assessment of student learning may include, but not be limited to, the following:

    1.0 Quizzes;

    2.0 Exams;

    3.0 Homework;

    4.0 Laboratory/Research Reports
